

convulsion

CN-1

The Convulsion CN-1 from Audible Disease is a nasty high-gain overdrive unit with a few extra features that push your sound into the realm of absolute madness. With a twist of the NOISE knob, you can blend pure white noise with your input signal for extra psychotic enjoyment. If that isn't enough craziness for you, this beast also has the ability to decimate the sound even further with the SPIT knob. By tweaking this knob, you'll hear why this pedal is called the Convulsion! You'll hear your sound start to cough, spit and sputter on the verge of auditory death. R.I.P.

VOLUME knob:

Adjust the final output level of the effected sound.

SPIT knob:

Thrashes the final sound.

Audio output

LED:

Lets you know if the effect is engaged or not.

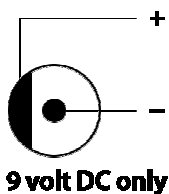

NOISE knob:

Blends in white noise with the input signal.

Audio input

Effect on / bypass

Special artwork by the esteemed Bay Area artist Bonnie Banks.

You may power the CN-1 with a standard "Boss" style barrel type power adapter (9 volts DC negative center pin) or with a 9-volt battery. We recommend the Visual Sound 1 SPOT power adapter. The battery may need replacing after some use. Simply remove the 4 screws on the bottom of the CN-1, remove the base and replace the battery with a fresh one. Unplug the cord from the input jack when not in use for longer battery life!!
